# INTRODUCTION

The aim of this project is to design a todo lsit website where you can write and cross out the task that you need to do for the day. Todo list are a basic but efective way used to organize people lives, one of the pioners and famous for using was Benjamin Franklin known for using lists to encourage his own self-improvement.(https://buffer.com/)
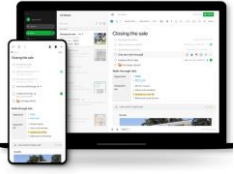

The todo list required to build is one that allow the user to enter all the necessary data that he requires to do during the day, and then cross out the already done ones. This idea is to be done in an inface way using a website.

With the new technology age and modernization people have specialize in a number of complexes field over, this fields however required a lot of task management that has result in increase of stress. Another problem is if people forgeot certain task this creates a acumulation of unresolved tasks that efect even more people. In the past year, 74% of people have felt so stressed they have been overwhelmed. (https://www.mentalhealth.org.uk/)

MARKET

For the market research we looked at similar sites already in the market to determine what's the competition and what's are the trends that the products follow and why.

Example	Name	Pros	Cons
	Easy flask made todo website	Easy to built	Lack flexabity and criteria Needs acount
	Todoist	Multiple categories, Connect to very devices, Has its own app	Has payed version Needs acount
	Trello	Allows interconnect of people a visualize their task	Payed, Lack of privacy, Foucous on corperation, Complexed, Not just todo

	Evernote	Good interface, Interconnected devices, Very good Notes, description, calendar sys, notifications customizable	Foucos on Professional More complex

TARGET

Different examples of people interested in this game: Who? What? Why and where?

The pyes of person interest in to todo list are persons with complex work flows, such as students studying in complex topics, entrepreneurs organize their time, creative artist brainstorming and developing ideas, or just the average house wife with organization of the house. (what and why)

Where? The easiest way to check quickly is the phone, however to facilitate the creation of app and allow multiple access we do online website that allows its access also on phone.

DESIGN SPECIFICATIONS

The product requirement list (Table 2) gives me a clear information about important features that must be thought of when creating a product. It also showed me about the thought process required when developing the product.

D- Stands for demands. These are requirements that are a must, they must be followed and executed when making sketches and coming up with ideas, such as health and safety requirements they are a must for all ideas to be developed.
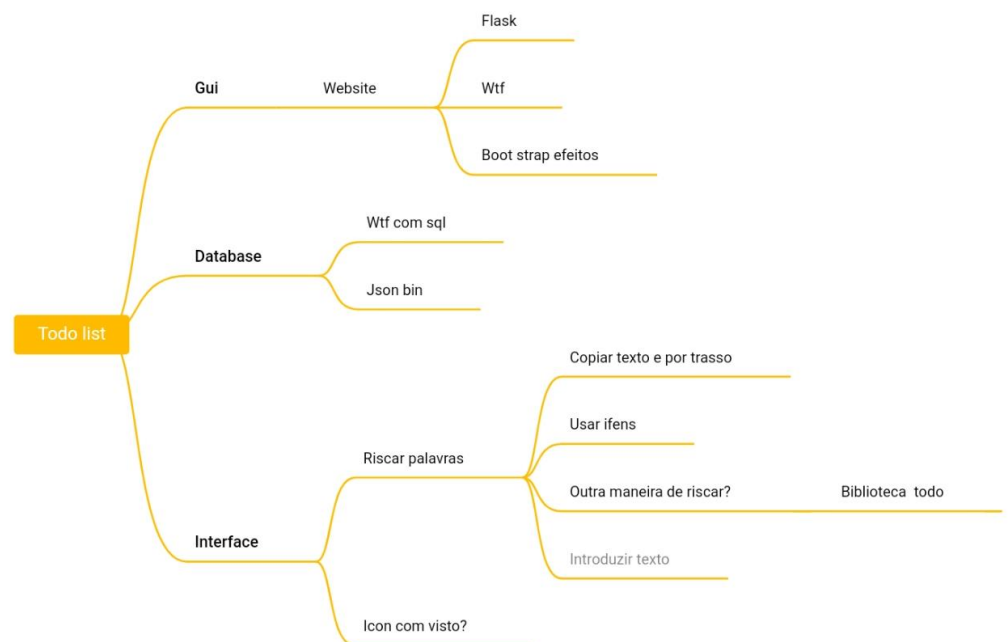

W- Stands for wishes. These are requirements that, as a designer, we want our product to have.

Requirements List For the Todo list	
D	*Is a Website*
D	*Input a output text (todos)*
D	*Able to cross and see the dalready done tasks*
D	*Save to be checked later*

w	*Access by phone*
w	*Sheculed and save in dates*
W	*Colores and nice interface*
W	*input different texts*
W	*category's*

MIND MAP

The purpose of the mind map (Figure 2) is to getting ideas and information out of the brain. It is a simple and quick way of emptying the mind into the paper. This process helped me a lot in organise information and find possible dificulties in the project. As example the cross task doen appeared to be chalaging.

Flow chart

After unloading the ideas into brainmap and select the good from the bad ones, we were left with ideas, some good of what we wanted in the projects. The following lines describe the functionality of the todo website.
